

Sierra-Cedar has extensive experience in designing Star Schema dimensional models that optimize business intelligence and enterprise performance management environments.

We excel in developing automated and performance tuned data Extraction, Transformation and Load (ETL) processes for organizations looking to gather and unite data from a variety of disparate sources within their organization. Our consultants have years of experience and truly understand the ETL processes that are required to supply enterprise performance management and business intelligence solutions with accurate and timely information.

At Sierra-Cedar, we work with a variety of ETL tools ranging from Informatica, Data Integration Manager, Oracle Data Integrator (ODI) and SQL Server Integration Services. Our automation techniques allow us to develop a parameter driven process that can be executed on a scheduled basis or run on demand utilizing the software you have today. We understand the issues of performance tuning a design when high volumes of data are involved, and can help you avoid project pitfalls in this area. We have also generated custom reporting available to all our clients. These reports are used to display package progress, ETL statistics, process times and performance trends of the packages.

Whether you are implementing an enterprise reporting product, a sophisticated OLAP solution, or a data-mining tool, a properly designed supporting data warehouse will enhance ease of use and query performance for your end users. Sierra-Cedar has the quality and expertise you need allowing you to take comfort in our experience and have Sierra-Cedar share our in-depth understanding and knowledge to assist your development team.

### **Sierra-Cedar provides the following Data Warehousing and ETL services:**

- [Data Warehouse Design](#)
- [Data Marts, Database Management](#)
- [Data Integration and Migration](#)
- [Extraction, Transformation and Load \(ETL\)](#)
- [Online Analytical Processing \(OLAP\) Reporting](#)
- [Data Warehouse Optimization and Re-Engineering](#)
- [Automated Data Management](#)
- [On-site or Remote Technical Assistance and Disaster Recovery](#)
