

VMware to AWS Migration Assessment

Are you looking
to transition away
from VMware?

You are not alone. We have worked with others who are looking at alternatives and would be happy to help you explore your options.

How can we help?

Our VMware to AWS Migration Assessment is a three-step collaborative process. Together, your business experts and our experienced team will evaluate your options and identify a path forward.

What is your role?

Depending on the scope of the migration, your business and IT experts should allocate 20-40 hours over 2-6 weeks to collaborate with our team in reviewing your systems. This will enable us to plan the most effective path forward.

Why Sierra-Cedar?

With over 2,000 VMware to AWS instance migrations, more than 100 Managed Services customers, and over a decade of experience working with AWS, we have the expertise to map out your VMware Exit Strategy.

STEP ONE

Plan

Executing a data center migration can take twelve to eighteen months and can be approached in smaller, incremental steps. A detailed review of your options will help outline your goals and establish both short-term and long-term objectives.

STEP TWO

Discover

The discovery phase allows us to assess your current server utilization and applications. The data collected will help identify server dependencies, highlight potential licensing issues, and estimate infrastructure costs in AWS.

STEP THREE

Results

The results of the assessment will provide a high-level plan with short-term quick wins and a long-term sustainable strategy.
