Sierra-Cedar helps to meet the critical needs of many organizations with complex, global reporting requirements with the utilization of Oracle Hyperion Financial Management and Oracle Hyperion Data Quality Management solutions to collect, validate, and analyze data across multiple transactional, legacy, and General Ledger Systems. Oracle's Hyperion Financial Management (HFM) combined with Oracle Hyperion Data Quality Management (FDM) helps to address the issues of decreased efficiencies and reduced internal financial controls due to the reliance on extensive spreadsheets while providing "best in class" Financial Consolidations and Reporting that support global requirements standards. HFM & FDM include many pre-built features to improve the financial close process along with a complete audit trail of all the necessary internal controls.

At Sierra-Cedar we are fully versed in supporting the global financial needs that meet the requirements of the most complex and demanding financial consolidation, lower the cost of compliance, and deliver an unprecedented level of financial data quality. We can assist in the process of developing and implementing key components of the enterprise performance management cycle to fully automate the financial consolidation and reporting process while providing a level of control, visibility, and transparency into the financial close and reporting cycle that enables management to be confident in the numbers they report to stakeholders.

Sierra-Cedar provides Oracle Hyperion HFM and FDM services:

- **Accelerate Reporting Cycles –** reduce closing cycles by days, deliver more timely results to internal and external stakeholders

- **Improve Transparency and Compliance –** Sarbanes-Oxley, GAAP, IFRS, SEC, local statutory, Sustainability Reporting (GRI) and many other requirements supported

- **Full Integration –** integrate not only with Hyperion products but also with your existing transaction systems, legacy applications, ERP and CRM systems, providing financial data quality management

- **Strengthen Internal Controls –** applications have a number of features that promote better processes thereby increasing internal controls

- **Protect Financial Data Quality –** best practices require that data be validated, have an audit trail from source to report, and provide confidence in the numbers

- **Reduce Risk of Spreadsheets –** removing this error-prone technology reduces the risk that information will not tie, errors will go undetected, or CFO has to place over-reliance on certain individuals
