

WebLogic Stability Issues? Need A Highly Available System? Get A WebLogic Architectural Review!

Predicting behavior across WebLogic environments depends on the consistency of WebLogic server configuration. System architecture, a discipline that produces predictive and reproducible results, establishes a standard environment framework, mitigates common IT issues, and provides a history of the decision-making process. Sierra-Cedar is an experienced Oracle software implementer and innovative solutions award winner with an exceptional track record for delivering robust Oracle solutions and helping clients make improvements on existing implementations and methodologies. Because the value of Oracle software can be lost when not implemented, used, or managed correctly, our experience implementing stable and scalable architectures and establishing solid internal policies and procedures is critical to realizing the full benefits of an investment. This Architectural Review includes an assessment of existing environments and recommendations to improve stability, scalability, flexibility, manageability, security, and performance.

Summary of Services

| | |
|---|---|
| <input checked="" type="checkbox"/> Evaluate WebLogic configurations and management practices | <input checked="" type="checkbox"/> Investigate current WebLogic concerns and future goals |
| <input checked="" type="checkbox"/> Conduct discovery sessions with admins, engineers, and key stakeholders | <input checked="" type="checkbox"/> Assess high availability and environment points of failure |
| <input checked="" type="checkbox"/> Review documentation on architecture and usage | <input checked="" type="checkbox"/> Compare setups with standards and best practices |
| <input checked="" type="checkbox"/> Explore a representative deployment to assess practices and approach | <input checked="" type="checkbox"/> Prepare a single deliverable document to capture the current state and recommend improvements |

Timeline and Scope

The typical WebLogic Architectural Review takes approximately 2–3 weeks depending on the complexity of the Client environment, its ability to provide security access, and the availability of current state documentation required for analysis. To streamline the engagement, Sierra-Cedar first provides a questionnaire to gather environment information to educate our consultant prior to going onsite. We then engage consultants with WebLogic Architecture and Administration skills to review the environment, complete an Architectural Scorecard, and make recommendations for improvement. While the Review does not include scope for executing the recommendations, Sierra-Cedar can submit a proposal at the Client's request.

Why Sierra-Cedar

Sierra-Cedar is an industry leader in Middleware consulting with proven capability to plan, architect, and implement robust solutions while also preparing your team to take ownership of the solution and continue to build upon its successes. Our Architectural Reviews are delivered by infrastructure specialists who offer valuable real-world experience, complex troubleshooting ability, and apply the knowledge of industry best practices to the engagement.
