Defining Workday Extensions

While Workday offers pioneering functionality and commitment to a Software as a Service (SaaS) solution that results in significant savings and superior Total Cost of Ownership (TCO), what can clients do for a truly unique business requirement that cannot fit within the Workday functionality?

Our proven offering meets these types of custom requirements by leveraging built-in Workday capabilities to add Quick Links and make Web Service requests. These two simple components allow seamless navigation to an external SaaS application that can offer a cost-effective and comprehensive solution without impacting the core value proposition of Workday. In essence, you can have your cake and eat it too!

How You Can Benefit

Do you have unique business requirements that are difficult to achieve through Workday configuration? Sierra-Cedar extension services allow you to meet and support those requirements with a SaaS solution and improve productivity while utilizing Workday's real-time APIs.

Sierra-Cedar's solutions can support unique requirements such as these:
- Streamlining journal entries
- Dealing with custom commissions
- Complex grant rules processing
- Simplified costing allocation
- Specific mobile-user interface needs

Our Approach

Sierra-Cedar Workday consultants and Solution Architects, with real-world industry expertise, conduct onsite design sessions to architect a solution so that all of your requirements are supported. Our industry experts then work in concert with consultants in our Solution Center that have deep Workday and SaaS product expertise to form a single cohesive team.

Throughout the project, the Sierra-Cedar team does continual knowledge transfer to client resources to ensure the client is capable of supporting the application at the completion of the project.
