

Sierra-Cedar's Pension Administration solution has been developed to meet the most challenging needs of a highly dynamic public retirement market. Our Pension Practice provides a full suite of services implemented by professionals with years of experience working within the public retirement space.

Sierra-Cedar understands the systematic impacts associated with fund and membership growth, continued legislative changes, and the evolution of member and retiree needs. To keep pace with increasing public retirement transformation, organizations require a flexible, robust, and configurable Pension Administration solution to meet their stakeholder needs today and well into the future.

Sierra-Cedar designs and implements Pension Administration solutions based on Oracle applications and technologies which can be hosted in your data center or in the Cloud. For more than twelve years, large statewide retirement funds with multiple employers and large municipal retirement funds have been leveraging the industry expertise of our experienced teams and Oracle applications and technologies to drive their pension line-of-business processing and customer service platforms.

Our Pension Administration solution enables retirement systems to manage their complex defined benefit and contribution plans with a comprehensive solution that can be configured to match their unique plan rules. As new business rule needs arise as a result of legislative changes, government mandates, healthcare revisions, collective bargaining amendments, court rulings, or business decisions, these changes can be added and tested using the configuration and rules engine which is part of our solution. Our flexible configuration and rules engine provides business process re-engineering options not available in other software packages. The advantages of our full-service offering include the following:

- Integrated solution presented in a portal framework with flexible capabilities to incorporate external content.
- Tailored branding and a full suite of content and collaboration management tools to enhance productivity.
- Robust workflow capabilities that support exception-only processing, leading to greater service performance and lower cost.
- Reporting and analytics tie directly back to line-of-business processes resulting in real-time, actionable information, for staff, members, employers, and retirees.

Benefits

- Adapt to changing regulatory requirements
- Improve the efficiency of your pension processes
- Upgrade, enhance, scale and maintain effortlessly
- Draw on years of successful Oracle implementations
- Address your evolving business requirements
