

Moving to Oracle Cloud Applications

Make your move to Oracle Cloud Applications

If your organization is on Oracle E-Business, you are most likely reviewing long-term options. With support ending in 2021, your current system has an expiration date. Don't let cost concerns keep you from making the best strategic decision for your company.

The question is not if an organization should move to Oracle Cloud Applications, but rather how to move faster and cost-effectively. New software installations are typically labor-intensive with a lengthy timeline and big price tag. For customers currently on Oracle E-Business, this traditional method does not need to apply when moving to Oracle Cloud Applications. Why? Because the move is Oracle to Oracle.

Same Concepts, Different Platforms

Our approach for moving clients to Oracle Cloud Applications involves pre-mapped business processes, functional configurations, and technical tools & accelerators. Our goal is to accelerate your move in an efficient way with less effort needed from your team; saving you time and money. This fast-track concept, based on Sierra-Cedar's Propel methodology, was built on a solid foundation of experience with traditional EBS on-premise upgrades and implementations as well as deep knowledge in Oracle Cloud. Here is what you can expect from our service.

Customizations

Sierra-Cedar has created analysis and mapping tools to review customizations. These tools combined with our knowledge of EBS and Oracle Cloud Applications make the mapping of customizations faster and easier.

Data

Our Data Migration toolkit consists of multiple components: pre-built extraction scripts from EBS, ability to analyze and translate into Cloud-ready routines, and staging the data for the Cloud. This process is repeatable for configuration and transactional data, and therefore reduces the time for data conversion.

Reports & Interfaces

Reports and interfaces are mapped, re-built if needed, and, in some cases, re-designed in the Cloud application. Sierra-Cedar's pre-existing library of reports and integrations help accelerate the process significantly.

Testing

Pre-built and automated testing routines rapidly validate the Cloud pods, allowing clients more time to review. Conference room piloting is a joint activity performed by Sierra-Cedar and the client, in order to confirm and refine the new Cloud pod.

Training

Training documents from Sierra-Cedar's Cloud Center of Excellence are provided; enabling quick training. With Oracle Cloud Applications intuitive interface and user familiarity with the Oracle platform, end-user training time is reduced.

Next steps

Learn more by signing up for a complimentary two-hour workshop. This workshop will include a high-level discovery, details of Sierra-Cedar's experience and solutions, a timeline of next steps, and testimonials from our clients. This workshop can be conducted in-person or via a web conference. To schedule the Discovery Workshop, email us at Contact@Sierra-Cedar.com or call **866.827.3786**.
