

Oracle Cloud Applications

Why healthcare companies are making the move

Secure employee and patient data ...

Cyberattacks against healthcare entities accounted for 79 percent of all reported data breaches during the first 10 months of 2020, and continue to rise dramatically, according to reports from Check Point and Fortified Health Security. Healthcare providers cannot let their guard down when it comes to securing data, Oracle Cloud Applications were developed with a focus on security first. They were designed with a secure isolation architecture which protects data from unwanted access and is built-in at multiple layers of the stack.

Ability to focus on the patient experience ...

Significant inefficiencies in cost and quality arise when business processes are not streamlined across various departments in healthcare organizations. Oracle Cloud Applications have been built with best-of-breed features from Oracle E-Business Suite and PeopleSoft products, while keeping in mind the current healthcare delivery models. New features and capabilities are released quarterly, ensuring that the system is up-to-date with the latest enhancements. Rather than spending time maintaining and upgrading systems, your IT team can focus on improving the patient experience.

Accurate, integrated, and timely data ...

Accurate, real-time data with easy-to-use dashboards improve productivity by allowing employees and administrators to make well-informed timely decisions. Oracle Cloud Applications are the most complete cloud solutions built on unified and integrated data models. As “Software-as-a-Service,” Oracle Cloud Applications do not require hardware and are device-independent, which means access is available anytime, anywhere.

Why they are partnering with Sierra-Cedar

Sierra-Cedar thrives on helping healthcare providers modernize mission critical systems. We specialize in moving organizations to Oracle Cloud Applications from other legacy systems. With more than 25 years of successfully delivering Oracle implementations and managed services for healthcare organizations, Sierra-Cedar understands the uniqueness of the industry and works to continue to be our clients' partner of choice.

As we continue to partner with Sierra-Cedar to develop value-added solutions, I am pleased with their flexibility and customer relationship management in making things happen. I would highly recommend them for your business automation challenges.”
